

Shemesh Automation has developed complete bucket packaging lines that can operate at speed

Wet wipes are a round offer

Shemesh Automation is showcasing its quick vertical round wipes canisters stuffer in Japan

Shemesh Automation Wet Wipes (SAW) will showcase what it describes as the world's fastest wipes loading machine – SAS250 – at Anex18 in Japan this June.

Already sold to a major wet wipes manufacturer, the SAS250 is a fast vertical round wipes canister stuffer which delivers speed and also production efficiencies. The SAS250 operates at twice the speed of its sister machine which is called the SAS120.

It features a vertical chute and a main servo-driven rotary turret, it handles rolls with diameters that may be bigger by up to 3mm than the canister opening and importantly, it delivers a sub 30 minute changeover time.

Speeds are up to 250ppm.

The SAS250 is only part of a full range of round wipes packaging solutions in the SAW portfolio. Available as standalone units, or as part of a complete turnkey wipes packaging line, the

SAW range includes: fully automatic unscrambling for canisters, a fast vertical rolls stuffing machine, a liquid filler and a cut and seal machine as well as a capper, a labeller and a form, fill and seal case packer.

“These are not generic machines but were developed for the specific market needs required for high quality canisters wipes production, and are just the tip of the iceberg in terms of the innovations the SAW team will be discussing at Anex18,” explains Carl Gunaratnam, marketing director at Shemesh Automation UK.
